

Pushp Hans

Flutter & Applied AI Engineer

Jammu, India — +91-6006581286 — pushp.hans.official@gmail.com — [LinkedIn](#) — [GitHub](#)

Profile

Flutter & Applied AI Engineer with 1+ year of production experience and 30+ public projects spanning mobile apps and multi-agent AI systems. I own delivery end-to-end — crafting polished Flutter UIs, building agent backends with LangGraph & FastAPI, and shipping to the stores. My work bridges mobile UX and autonomous AI, perfect for early-stage startups shipping AI-first products.

Core Skills

- **Mobile:** Flutter, Dart, GetX/Riverpod, Clean Architecture, REST API Integration, Firebase, SQLite, Native Android APIs
- **AI & Backend:** LangGraph, LangChain, FastAPI, Python, Vector DBs (Pinecone, pgvector), LLMops (LangSmith), LLM Integration, Streaming APIs, PostgreSQL, Guardrails

Experience

Flutter & Applied AI Engineer

Zonixsoft, Jammu

Oct 2025 – Present

- Independently designed and deployed a production multi-agent AI system (LangGraph + FastAPI) with dynamic SQL generation, conversational memory in PostgreSQL, and guardrails; passed QA with 4 testers.
- Slashed agent response latency from 35+ seconds to under 7 seconds via architecture and prompt optimization.
- Built and maintained multiple Flutter apps using Clean Architecture; owned full delivery pipeline including Play Store & App Store releases.

Flutter Developer Intern

Codices Technologies LLP

Jan 2025 – Jul 2025

- Developed Flutter features under senior guidance; integrated backend APIs and resolved production issues.

Freelance Flutter Developer

Contract, Remote

- Built a B2B Flutter app for a pharmaceutical company (MasterHealthcareApp) with role-based flows, API integration, and deployment — actively used in production.

Projects

Full-Stack AI Mobile App

- **Vibe Check** – Complete mood-tracking & style-review app with Flutter frontend and Python FastAPI backend. Integrated an AI agent that analyzes user-submitted photos and generates personalized reviews, tips, and commentary. Demonstrates full-stack ownership, computer-vision agent integration, and production-grade mobile + AI delivery.

AI Agent Systems (Monorepo & Standalone)

- **AI Agents Monorepo** – Curated repository of multiple agent projects for easy recruiter discovery; currently features three distinct sub-projects showcasing progressive complexity in agent design, orchestration, and real-world use cases.
- **Multi-Agent Customer Support** – Triage incoming requests, generates accurate answers, and escalates complex issues using coordinated agents. Highlights production-ready customer service automation with domain-specific dialogue flows.
- **Advanced ReAct Agent** – Implements the Reason+Act pattern with persistent memory, external tool integration, and iterative refinement loops. Demonstrates deep understanding of agent architecture and prompt-action separation.

Mobile Apps with Real-World Utility

- **Expense Tracker** – Offline-first expense manager with full CRUD, monthly charts, and local SQLite caching. Shows data visualization, clean state management, and offline resilience.
- 14+ additional AI agents (travel planner, essay reviewer, support bots, corporate recon, etc.) and many Flutter mobile apps (emergency assistant, ebook reader, custom dialer, healthcare, and more) – all public on GitHub.

Education

B.Tech in Computer Science Engineering

Himachal Pradesh Technical University, HP, India

2021 – 2025
